Si2ren direct query

maxresdefault

Goal:

- Build a module that alow us to do direct queries from ANB to Siren.
- Develop a methodology and a workflow of the system (documentation, tools, expertise)

Actually

Done

- beginning of a road map with date

Beginning of the project (starting point)

- General documentation (situation)

Siren queries langage

- Extention of elastic search search API
- JSON instruction (REST API like query)
- Based on a abstract tree syntax

Elastic search

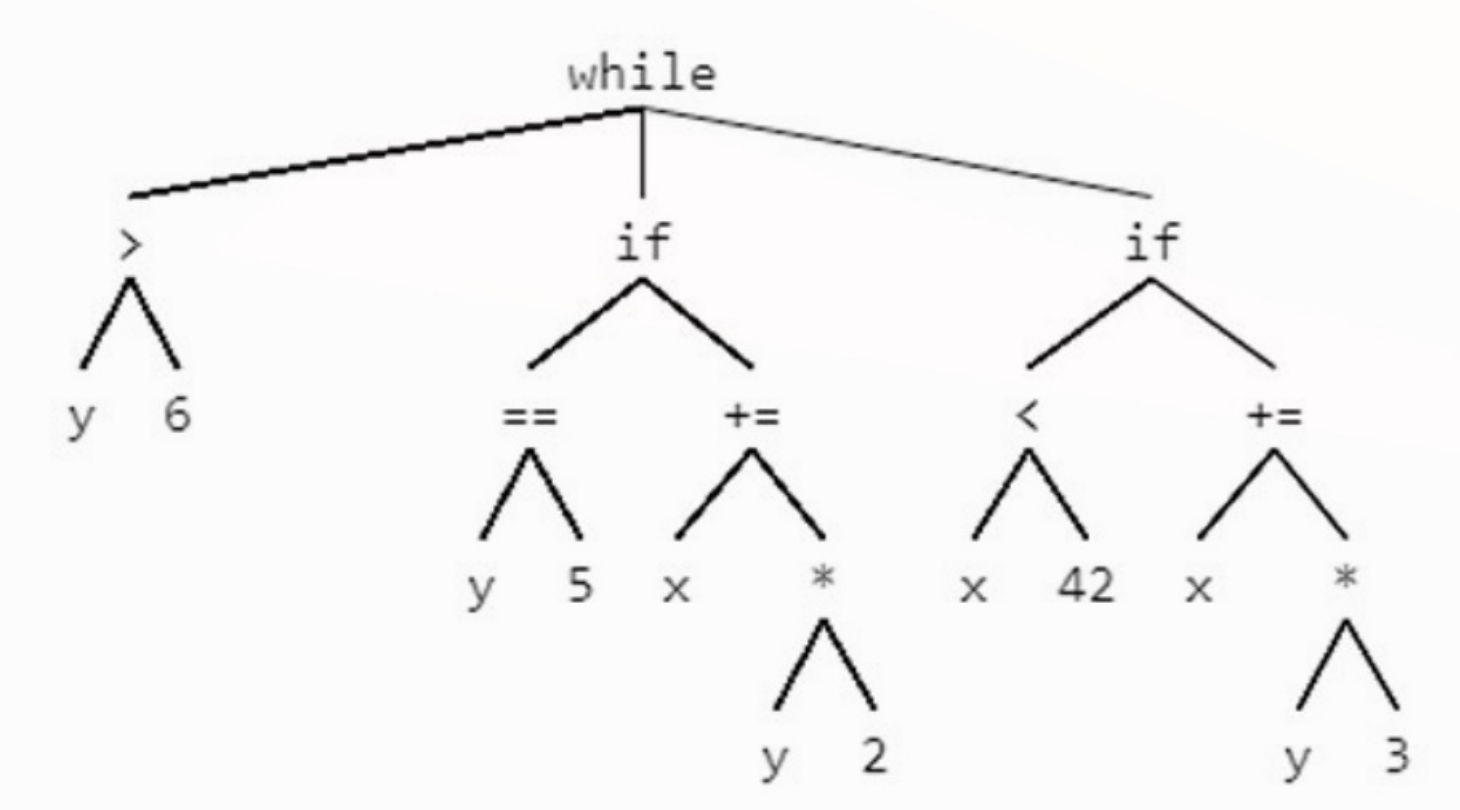
elastic_search

Query DSL

Elasticsearch provides a full Query DSL (Domain Specific Language) based on JSON to define queries. Think of the Query DSL as an AST (Abstract Syntax Tree) of queries, consisting of two types of clauses:

- Leaf query clauses
- Compound query clauses

Abstract syntax tree



ast
